

Vines

Vines are different from trees or bushes. Vines are climbing plants. They grow up walls. Or, a vine can twine itself around something else. Vines have a spine that can move. This makes it easier for them to climb. Ivy is one kind of vine. A pine tree is not a vine. Some fruits grow on vines. Grapes grow on vines. The sunshine helps the grapes to grow. Grapes are used to make wine. Wine is served in fine dining restaurants. Without grapes, there would not be wine. Without vines, there would not be grapes.
