Egg Fizz

You can do science with a few things from your house. First, you will need to hard boil an egg. Put the egg in a pot of water. Heat the water so it boils. Let it cook. Ask your mom or dad to help you with this. Then, fill a cup with vinegar. Put the egg in the cup. Watch the egg. You will see fizz above the egg. Keep the egg in the cup for one day. Pull the egg out of the cup. Feel the egg. You will feel that it has a soft shell. Move the egg to a dry spot. Let it sit for a day. It will get hard again.
